PRE-FILTER EQUIREMENTS

Pre-filters are required for optimum operation of all water ionizer installations. This is due to the quality of water throughout the Thailand. The installation of pre-filters shall allow the machine filter to be utilized more efficiently to enhance the operation of the ionizer. Please purchase your own set of pre-filters from department stores who sell water filtration systems.

Take note of the following recommendations:

Pre-filters used in SOFT WATER should have a minimum of two (2) canisters with the following three types of filter cartridges:

Sediment (PP). Filters, dirt, rust and other contaminants. Fiber cartridges are available. Fiber cartridges are disposable. Maintenance: The five (5) or (10) micron sediment filter needs to be changed with the change of its appearance. The white filter will turn brown as the trapped sediment level increases. The filters should be changed at any time based on visual appearance. To determine the life of the filters, turn the filters upside down. If the brown color reaches the plastic core, the filtration capability of the filter has been fully utilized. This is the time to change cartridge. Another indicator to change filter is when the water flow through the machine is slow or has stopped. The pre-filter may be clogged.

Carbon Filter. These filters chlorine and prevents unpleasant odor. Disposable.

Maintenance: The carbon charcoal filter may be changed every three (3) to six (6) months depending on the chlorine level in the tap water. Periodic chlorine tests on the filtered water that flowed through the pre- filter unit before it flows through the ionizer will determine when this filter needs to be changed. To test this pre-filter, pull off the white machine hose connection to the filter. Turn on the faucet and let the water flow through the pre-filters. Collect a sample of water coming out of the carbon charcoal spout. Test for chlorine. If the chlorine test is positive, the pre-filter is not working. Change the carbon char-coal cartridge.

Ion Exchange Filter(Resin). This filter, if required, shall be installed as a third (3rd) canister. These acts as a water softener de-vice that removes minerals from very hard water.

Using HARD/DEEP-WELL WATER would not guarantee the same function of the machine as that of SOFT WATER. It could clog the machine. Frequent E-cleaning is required, two (2) times a week at the least. With the above details in mind and with the knowledge of the E-cleaning requirement, Enagic Thailand, Shall hold the right to decline any complaint concerning solidification of minerals or clogging of the plates.

The pre-filter canisters may be purchased from Enagic Thailand. as well as from various pre-filter stores that sell water filtration systems.
